

# Virtual File Safe Services

## Cost-Effective Cloud Storage

### Architecture Flow

**DataLockDown offers a very cost-effective approach to in-house storage**

**Storing your inactive data with Virtual File Safe is easy and offers many advantages to save you time and money.**

**No Large Capital Outlay**  
Virtual File Safe runs on your existing infrastructure and becomes part of your monthly operating budget. No large initial purchase required.

**Reduced Total Cost of Ownership**  
Virtual File Safe delivers predictable, manageable costs with no ongoing system investments or maintenance headaches.

Our off-site, managed service frees you from equipment upgrades

**Scalable Capacity**  
With Virtual File Safe, additional capacity is immediately available for you whenever needed—for short term spikes, long-term structural changes (such as acquisitions), and rapidly expanding digital file archives.

### DIGITAL DATA EXPLOSION

As digital data continues to skyrocket, so does the need for storage, escalating more than 50% per year. Not surprisingly, organizations are struggling to keep pace. Driven by the mandate to save everything “just in case,” organizations keep every record, report, and email—even data not in use—stretching I.T. budgets and resources thin and compromising their ability to deal with the most critical information first. To help companies reduce the costs of storing and managing inactive data, DataLockDown has created an enterprise-class cloud-based storage archive service, DLD-Virtual File Safe. This service is part of DataLockDown’s SAAS portfolio, which includes email management archiving, and data backup/recovery.

### ENTERPRISE-CLASS HOSTED DIGITAL STORAGE

Virtual File Safe provides a simple but cost-effective, hosted, and managed storage service that you can integrate within your current infrastructure to migrate your inactive data files to DataLockDown’s secure data centers. The service enables you to easily store your inactive data off-site and retrieve it, on demand, whenever and wherever you need it within your corporate environment.

### SAFE, SECURE, AND ACCESIBLE

Because of DataLockDown’s 25 years of information technology and data storage protection, our clients can focus on the most critical data in use by their organization and rest soundly that DataLockDown is providing them with the security, storage protection and infrastructure support needed to ensure that their data is safe, secure, and accessible.

# Virtual File Safe Services

## Service Features and Benefits

### HOW IT WORKS

Virtual File Safe provides an on-site appliance that acts like a file server and is based on standard CIFS/NFS protocols. Files stored on the Virtual File Safe appliance are sent to DataLockDown's secure data centers. Because data is continuously replicated to a secondary center, you get fast, uninterrupted access in the case of a disaster.

This service gives you a single, centralized storage system that supports any client operating system or application that can access data on CIFS/NFS file system. It supports all types of inactive data that can be stored on a CIFS/NFS file server, including email, databases, Microsoft® Office files, PDFs, logs, and multimedia in industry-standard file formats.

## System Requirements

### EASY TO DEPLOY AND ACCESS

Virtual File Safe can be deployed as a stand-alone solution or can be integrated with your existing file archiving and file virtualization technologies. Files can be copied or moved onto the Virtual File Safe appliance in a variety of ways, including:

- **Manually:** Simply move selected files from file servers onto the Virtual File Safe appliance. No additional tools are required.
- **Automatically:** Move files from primary storage to the Virtual File Safe appliance using customer-created scripts or off-the-shelf products. Alternatively, you can use the VFS appliance as the disk target for an off-the-shelf backup program. You can also incorporate using service into existing HSM or File Virtualization deployment, using in-house archiving products.

Virtual File Safe transmits files over a secure VPN network to DataLockDown Services' data centers. You can retrieve your data whenever and wherever you need it via online on-demand access. You can also transfer and retrieve large quantities of data using our high speed DLD Corporate Quick-Response service.

### SERVICES AVAILABLE

- Technical Support
- Installation and Setup
- Maintenance
- Application Support
- Hardware Support
- Guaranteed Warranty

### TECHNICAL SUPPORT

24/7 Live Phone Support

24/7 Web Support

### Benefits

- Reduce storage cost
- Meet scalability demands
- D/R in case of a disaster
- D/C Mirrored Sites
- 25 Years of IT experience
